

## Our Solar System What's the Word?

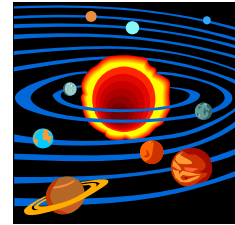

Name \_\_\_\_\_

Fill in the blank spaces using the words provided below so that the statements make sense.

Hydrogen	Earth	Airless	900
Rings	Jupiter	Sun	Ice
Helium	Asteroids	Second	-300
Sixth	Venus		

I live on the planet \_\_\_\_\_. It is the only planet where there is known life. Plants and trees live on my planet as well. This is made possible because of the light from the \_\_\_\_\_. Our weather and climate depend on it. My planet is not the largest, however. \_\_\_\_\_ is the largest. It is more than one and a half times as big as all the other planets put together!

\_\_\_\_\_ is called the sister planet to mine because they are about the same size. It does not have clouds of water droplets like my planet. Its clouds are made up of sulfuric acid. Its temperature reaches \_\_\_\_\_ degrees (F).

At least on my planet, I don't have to worry about \_\_\_\_\_. They are responsible for the many craters on Mercury. I could not live on Mercury anyway because it is practically \_\_\_\_\_. Plus, at night, the temperature drops to \_\_\_\_\_ degrees (F)!!

If I could move to a different planet, I think I would choose Saturn. It is the \_\_\_\_\_-largest planet. Saturn is mostly made up of \_\_\_\_\_ and \_\_\_\_\_. It is the \_\_\_\_\_ planet from the sun and has interesting \_\_\_\_\_ around it. They are made of \_\_\_\_\_, dust, and rock.
